

CASSIOPE

ACOUSTICAL BAFFLE SYSTEM

The Cassiope design is part of our new acoustical baffle collection called Constellation by FeltKüter.

CASSIOPE

The Cassiope model stands out for its elegance and beauty. Smaller in size, this acoustical baffle system can be installed above a meeting table, a restaurant table, or any collaborative space. Its circular shape gives it an intimacy that improves the customer experience.

IDEAL FOR RESTAURANTS

One of the most valuable assets for a restaurant in attracting, satisfying, and retaining customers, is its interior decoration and acoustics. Suspended above the table, the Cassiope baffle system reduces the reverberation of noise, thus ensuring a perfect level of intimacy and comfort. This baffle system will be more than an accessory since it doesn't only improve the acoustic comfort, but it also contributes to the design of your space. Thanks to its shape, the Cassiope acoustical baffle system allows light emitted by the lighting fixtures to fill the room.

SOUND ABSORPTION

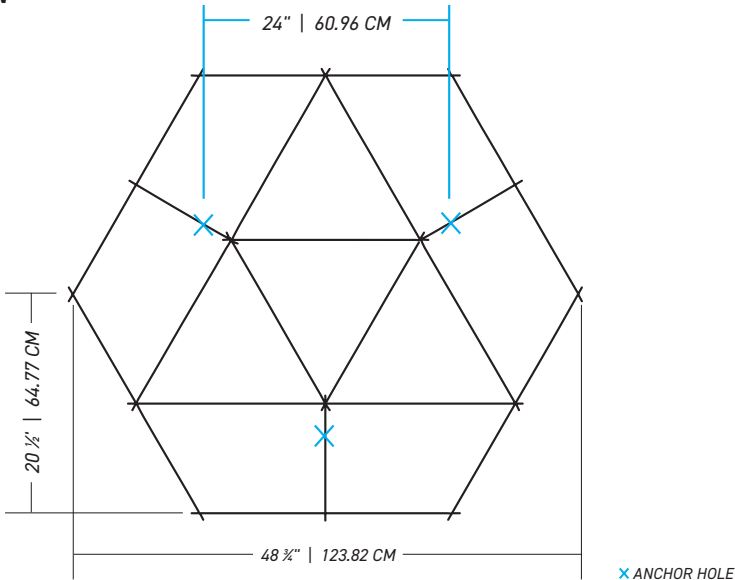

The internal triangular shape of the Cassiope model improves noise attenuation while its overall hexagon shape allows sound absorption on all sides. The air space inside gives it good acoustic properties. Thanks to our Düotex acoustic felt, the noise is filtered and attenuated.
