

# ORION

## ACOUSTICAL BAFFLE SYSTEM

The majestic Orion acoustic baffle system is part of our new Constellation collection by Feltkütür.

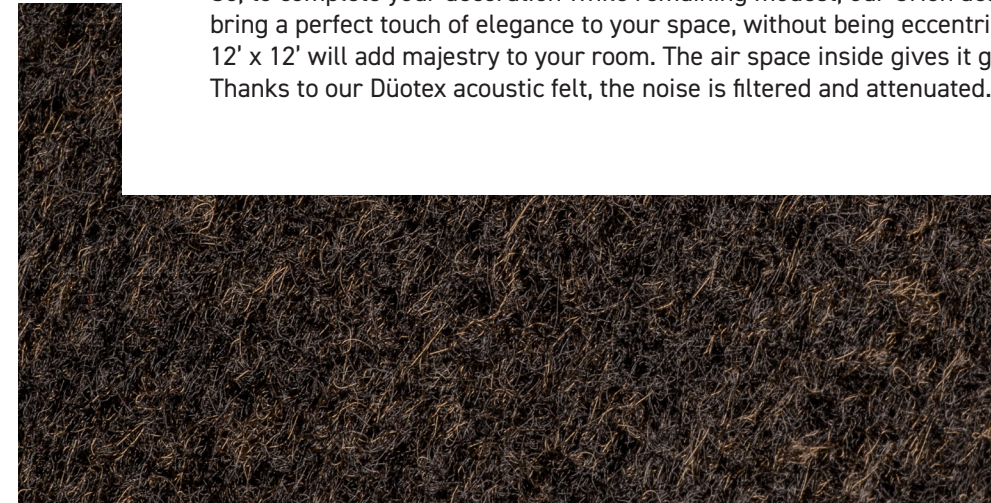

# ORION

The Orion acoustic baffle system distinguishes itself by its quadrilateral geometry. Its surface is divided into squares or covered with crossed lines forming absorbent squares. This grid pattern is the result of the imagination of Scandinavian brands. This contemporary design adds charm to all types of environments, such as lobbies, open plan offices, and restaurants with great ambiance.

The Orion model is simple, minimalist, and refined. Its multiple openings allow the light to pass through and light up the room.

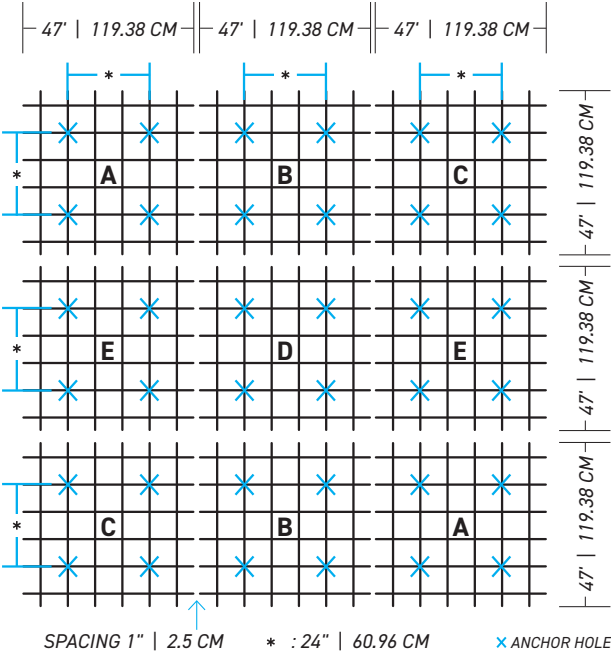

So, to complete your decoration while remaining modest, our Orion acoustic baffle system will bring a perfect touch of elegance to your space, without being eccentric. Its large size of 12' x 12' will add majesty to your room. The air space inside gives it good acoutic properties. Thanks to our Düotex acoustic felt, the noise is filtered and attenuated.
